

Infrastructure Plan

Grampians Health’s Infrastructure Plan 2023-2043 is a roadmap to future-proofing our facilities, enhancing access to healthcare and delivering care closer to home.

As a leading healthcare service, we recognise the vital role of infrastructure in delivering high-quality care, supporting our dedicated staff and fostering innovation and sustainability.

Why we need an Infrastructure Plan:

- To steer infrastructure, planning and investment priorities and partnering opportunities.
- To help construct new facilities tailored to the specific needs of local communities, incorporating future care models and prioritising safety, inclusivity and cohesive integration of digital systems.
- To help guide allocating resources for investment in equipment and technology.
- To create environmentally conscious facilities that benefit our communities and serve as a model for others in the healthcare industry.

The Infrastructure Plan will undergo periodic updates every five years and provides three priority areas:

Future Focused Infrastructure	Technology, Research, and Innovation Workforce	Finance and Environmental Sustainability
<p>Outcomes</p> <ul style="list-style-type: none"> New facilities across Grampians Health Safe and inclusive facilities Cohesive digital systems 	<ul style="list-style-type: none"> Technology-based solutions Research 	<ul style="list-style-type: none"> Logistics Management Net Zero Emissions Sustainable Support Services
<p>Measures</p> <ul style="list-style-type: none"> Progress against digital health and infrastructure plans 	<ul style="list-style-type: none"> Embedded culture of research and innovation 	<ul style="list-style-type: none"> Increased commercial business revenue to support increased service Reduced impact on the environment from daily operations
